ENERGY MODEL

Garcia, Galuska & DeSousa
Consulting Engineers Inc.

375 Faunce Corner Road, Suite D, Dartmouth, MA 02747-1258

Energy Cost savings of 33.8% and an Energy Use Savings of 41.6%.
This would equate to 13 LEED v4.0 points for EAc1.

Upton Community Center - LEED v4.0 Energy Savings Summary

*Combined expense savings is the difference between the combined annual expense of the baseline and building in comparison.

**Energy cost savings percentage is the difference between the annual energy costs of the baseline and building in comparison.

***Energy savings percentage is the difference between the annual energy consumption of the baseline and building in comparison.

Note 1: Values based on energy model performed for HVAC System Life Cycle Cost Analysis purposes. A 30% safety factor should be applied for budgeting purposes to account for potential variances to the actual operation of the building. Per ASHRAE Standard 90.1:

Neither the proposed building performance nor the baseline building performance are predictions of actual energy consumption or costs for the proposed design after construction. Actual experience will differ from these calculations due to variations such as occupancy, building operation and maintenance, weather, energy use not covered by this procedure, changes in energy rates between design of the building and occupancy, and the precision of the calculation tool.

LEED SCORECARD

LEED V4.0 rating system, 46 points + 7 maybe. Certifiable, with potential to push to Silver.
